

Welcome to our game, Theos!

Table Of Contents:

0.1 - Terms

0.2 - Known Bugs

1.0 - Beginning Screen

1.1 - Menus

2.1 - How To Buy Tiles

2.2 - Types of Tiles & Tile Mechanics

2.3 - Tile Statistics

3.1 - How to Buy Structures

3.2 - The City Hall

3.4 - Structures and Statistics

4.1 - Citizens

4.2 - Managing Citizens

4.3 - Buying Citizens

5.1 - Objectives

0.1 - Terms

Materials - The term for Wood, Food, and Stone resources

Elements - The terms for Earth, Wind, Fire, and Water resources

Citizens - The people living in your city

Tile - The actual “biomes” or “areas” you place down.

Structures - The buildings you place onto tiles

0.2 - Known Bugs

When in Full Screen, and after the game is minimized, when the game is entered again there will be a white rectangle on the top of the menu. It does nothing and is inconsequential.

When a tile is selected beside the City Hall, and a citizen is produced, the tile that the City hall is on will appear to be on the tile selection border. This bug is inconsequential and is a visual error that is fixed by selecting another tile.

1.0 - Beginning Screen

To launch the game, simply open the exe

When first booting up the game, you will be met with an open sea and your HUD. This section will go over the general idea of what each part of the HUD is, and later sections will go into further specifics.

The Beginning Game Screen

1.1 - Menus

Each colored arrow (and the colored rectangle) in the image below corresponds to the description beside the specified color

Yellow - This is the location where the buttons to buy tiles, structures, and citizen management appear. The menu cycles when clicking on the 3 buttons located on the far left.

Black - This is the default option when the game starts, when this button is pressed, the menu where the buttons to buy tiles will appear where the yellow arrow is pointed to.

White - Like black, when this button is pressed, the menu for buying structures will appear where the yellow arrow points to.

Grey - Same purpose as black and white, when this button is pressed, the menu for citizen management appears where the yellow arrow points to.

Red - This is the resource bar. It shows the 4 element resource that is used to buy tiles on the left, the 3 material resources on the right, and the citizens between.

Green - This is the game screen, and where you see the tiles and structures that are placed.

2.1 - How To Buy Tiles

Instructions on how to buy and place a tile!

To buy tiles and begin the process of creating your world, all you have to do is click on an ocean tile you want the tile to be placed on, and then click the button with the type of tile you want to place down. Careful though, creating a perfect world is very hard, as when you choose a tile type, a random tile of that type will be placed.

For example, if I choose to place down a stone tile, what will be placed down is a random tile of the rock category (tiles of each category can be found in section 1.2).

It should also be known that you cannot replace a tile that is not ocean with another tile. (If you select a forest tile and buy another tile on it, nothing will happen). Be careful with your choices!

2.2 - Types of Tiles & Tile Mechanics

Here is a visual of all the tiles found in the game:

Their names are:

Rock Tiles:	Hot Tiles:	Wet Tiles:	Grass Tiles:
Goat	Hot Forest	Marsh	Cows
Metal	Oasis	River	Forrest
Mountains	Pyramids	Swamp	Plains
Cave	Desert	Waterfall	

Each tile has a certain resource cost, produces elements and materials when worked on by a citizen, a specific citizen capacity, and citizen death modifier (See 4.1). The specific statistics will be in the next section, however just know that tiles are a necessity if you want to grow your world.

2.3 - Tile Statistics

Rock Tiles:	<i>Goat</i> Element type: Earth Element production: 2 Material Type: Food Material Production: 2 Citizen Capacity: 1 Costs: Water: 15 , Wind: 10 Danger Modifier: 1.05	<i>Metal:</i> Element type: Earth Element production: 5 Material Type: Stone Material Production: 5 Citizen Capacity: 1 Costs: Earth: 20, Wind: 5 Danger Modifier: 1.2	<i>Mountains</i> Element type: Earth, Wind Element production: 2, 2 Material Type: Stone, Wood Material Production: 2, 1 Citizen Capacity: 0 Costs: Earth: 15, Wind: 10 Danger Modifier: 1.2	<i>Cave</i> Element type: Earth Element production: 4 Material Type: Stone Material Production: 3 Citizen Capacity: 1 Costs: Earth: 20, Wind: 5 Danger Modifier: 1.5
Grass Tiles:	<i>Cows</i> Element type: Wind Element production: 2 Material Type: Food Material Production: 5 Citizen Capacity: 1 Costs: Wind: 15, Water: 10 Danger Modifier: 1.1	<i>Forest</i> Element type: Wind Element production: 2 Material Type: Wood Material Production: 5 Citizen Capacity: 1 Costs: Earth: 10, Wind: 15 Danger Modifier: 1.05	<i>Plains</i> Element type: Wind Element production: 3 Material Type: Wood, Food Material Production: 1, 3 Citizen Capacity: 1 Costs: Earth: 10, Wind: 15 Danger Modifier: 1.05	
Wet Tiles:	<i>Marsh</i> Element type: Water Element production: 3 Material Type: Food, Stone Material Production: 2, 2 Citizen Capacity: 1 Costs: Water: 15, Wind: 10 Danger Modifier: 1.01	<i>River</i> Element type: Water Element production: 4 Material Type: Food, Wood Material Production: 3, 3 Citizen Capacity: 1 Costs: Water: 20, Wind: 5 Danger Modifier: 1.2	<i>Swamp</i> Element type: Water Element production: 1 Material Type: Wood, Stone Material Production: 2, 1 Citizen Capacity: 1 Costs: Water: 15, Earth: 10 Danger Modifier: 1.2	<i>Waterfall</i> Element type: Water Element production: 6 Material Type: Stone Material Production: 1 Citizen Capacity: 1 Costs: Water: 20, Wind: 5 Danger Modifier: 1.3
Hot Tiles:	<i>Hot Forest</i> Element type: Fire Element production: 1 Material Type: Wood Material Production: 3 Citizen Capacity: 1 Costs: Wind: 10, Fire: 15 Danger Modifier: 1.2	<i>Oasis</i> Element type: Water, Fire Element production: 3, 1 Material Type: Wood, Food Material Production: 2, 2 Citizen Capacity: 1 Costs: Fire: 15, Water: 10 Danger Modifier: 1.01	<i>Pyramids</i> Element type: Fire, Wind, Water, Earth Element production: 6, 4, 1, 2 Material Type: Stone, Wood, Food Material Production: 6, 2, 2 Citizen Capacity: 1 Costs: Fire: 20, Earth: 5 Danger Modifier: 1.8	<i>Desert</i> Element type: Fire, Earth Element production: 4, 2 Material Type: Stone Material Production: 1 Citizen Capacity: 1 Costs: Fire: 15, Earth: 10 Danger Modifier: 1.2

3.1 - How to Buy Structures

Structures are another important aspect of building your world. They increase the material generation of a tile by a lot, however they remove the generation of elements from that tile as well.

Instructions on how to buy and place a structure!

Structures can only be placed on tiles, and as such, a tile must be placed before anything can be done. After a tile is on the board, select it, and click on the “structure” button located on the left side of the menu, and select the tile you wish to purchase.

Each structure has different purposes, however they can only be placed a certain radius around the city hall, which is covered in the next section

3.2 - The City Hall

The City Hall is the center of your gameplay. While you can place tiles anywhere on the map, structures are required to be placed in a limited area around the City Hall. Furthermore, resources can only be generated in that limited space as well.

In addition, all idle citizens (See 4.1) are stored inside the City Hall, and it holds housing and storage like a storehouse (See 3.3) and a house (See 3.3).

Button to place the City Hall!

Placing the City Hall works the same way as placing structures, just select a tile, enter the structure menu, and click the “Place City Hall” button. The City Hall can be placed on any tile, so choose one that you like the most.

After the City Hall is placed, the button changes to “Upgrade City Hall”, which does as it says. Upgrading the City Hall provides extra storage, however the most important feature is that it allows you to access more tiles away from it. A level 1 City Hall can allow you to put citizens and structures 1 tile away from the City Hall, and a level 2 City Hall allows you to put citizens and structures 2 tiles away, and so on.

The cost of the City Hall’s first three levels are as shown below, using Wood, Stone, and Food materials respectively

Level 2: 0, 100, 120

Level 3: 50, 150, 200

Level 4: 400, 300, 500

Level 5: 500, 600, 800

And then each level afterwards is 25 of each material multiplied by the current City Hall level cubed. So level 5 would cost 1,600, of each resource (25×4^3), and so on.

3.3 - Structures and Statistics

The full breakdown of all structures are as follows:

City Hall: Starting Citizen Capacity: 5 Storehouse Capacity Per Level: add 150/Level Starting Material Capacity: 100 Resource Multiplier: 0	House: Increases Citizens By: 10 Costs: Stone, Wood, Food Cost Amount: 3, 10, 5
Blacksmith: Resource multiplier: 2 Citizen Capacity: 2 total on tile Costs: Stone, Wood Cost Amount: 10, 5 Danger Modifier: Can Be Placed On: Rock Tiles	Explorer Guild: Resource Multiplier: 2 Citizen Capacity: 2 total on tile Costs: Stone, Wood Cost Amount: 10, 10 Danger Modifier: Can be Placed On: Wet Tiles
Storehouse Increases Storage By: 100 Costs: Stone, Wood, Food Cost Amount: 5, 10, 10	Boathouse Resource multiplier: Citizen Capacity: 2 total on tile Costs: Stone, Wood Cost Amount: 3, 15 Danger modifier: Can Be Placed on: Wet Tiles

In general, the House increases citizen capacity, but prevents **ANY** resource or element from being generated on it, while the Storehouse does the same but increases element and material storage capacity instead.

The Blacksmith, Boathouse, and Explorer Guild increase how much materials you gain from the tile it is placed on, and can have an additional citizen placed on it. These structures prevent **ALL** element generation, however.

4.1 - Citizens

Citizens are how you get resources from tiles. By placing citizens on them, the resource (based on what tile you place them on) is produced every second. Citizens themselves are produced when you have 20 units of Food, every $18 - \text{City Hall Level} * 2$ seconds, until City Hall level 8, at which point Citizens will be produced every second.

Each Citizen also has an age, and a chance of death. Citizens have a chance of death every second, and their chance of death is $(0.0005 * \text{age}) * \text{tile death multiplier}$. Citizen's age also increases every second

The amount of citizens you have can be found in the resource bar, beside the stickman icon, as shown below:

The order of the numbers, respectively, is:

Idle Citizens, Current Total Citizens/Total Citizen Capacity

4.2 - Managing Citizens

To manage citizens, you must first have:

- A City Hall
- Tiles
- Citizens (Obviously)

Then, you can click the “Manage Citizens Button” and start placing them on tiles

After selecting a tile, simply click the “Add Citizen To Tile” button to use an idle citizen and place them on the tile. Likewise, if you select a tile with a citizen on it, and click the “Remove Citizen On Tile”, it will convert that citizen into an idle citizen.

Make sure you pay attention to your citizens, you don't know when they might die!

4.3 - Buying Citizens

NEW FEATURE YIPPEE

Additionally, if you are struggling to manage your citizens, you can now create them through the use of elements and food. To do so, simply go to the “Manage Citizens” menu, and click the “Create Citizen” button when the resource conditions are met

The ***NEW*** Create a Citizen Button!!!!

5.1 - Objective

There are only 3 objectives of Theos:

- Avoid Extinction (Stay above 0 Citizens)
- Make your world work, and make it cool!
- Have Fun!

The game goes on forever (unless you lose all your citizens), so try your best to do the things you want to do!
